

Release-Notes – January 2008

>>> One click download of files

When you click on the name of a document or drawing, it will be downloaded directly. This works in all applications: document management, drawing management, What's New, Bids, etc.

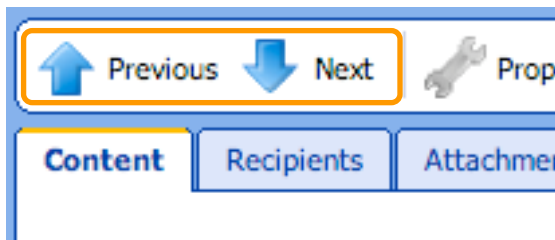

>>> Create new versions faster

For more convenient creation of versions we now offer a separate Button „New version“. If you use that, you can also write a conversation with the new version (like for a new document).

>>> Fast change between conversations

When you read a conversation you can jump with the new buttons "next" and "previous".

>>> Write a conversation and upload a document in parallel

When you write a new conversation, you can keep on working in the main window. You can also look something up in another conversation or upload a document.
